Our Pitch

Hivemind is an **artificial life simulation** and colony **management** game for **PC** where you:

- **Build your hive** structure hex-by-hex within a hollow tree trunk.
- **Breed and mutate** specialized bee species using a unique three-part genetic system, each species and mutation carrying its own **special abilities for survival**.
- **Manage** internal **moods and resource production** to ensure the survival of the collective.
- **Merge** your hive **with up to 3 friends** to operate as a single, massive ecosystem.

The game offers a warm management experience that encourages **social cooperation**, **creative base-building**, and **genetic experimentation**.

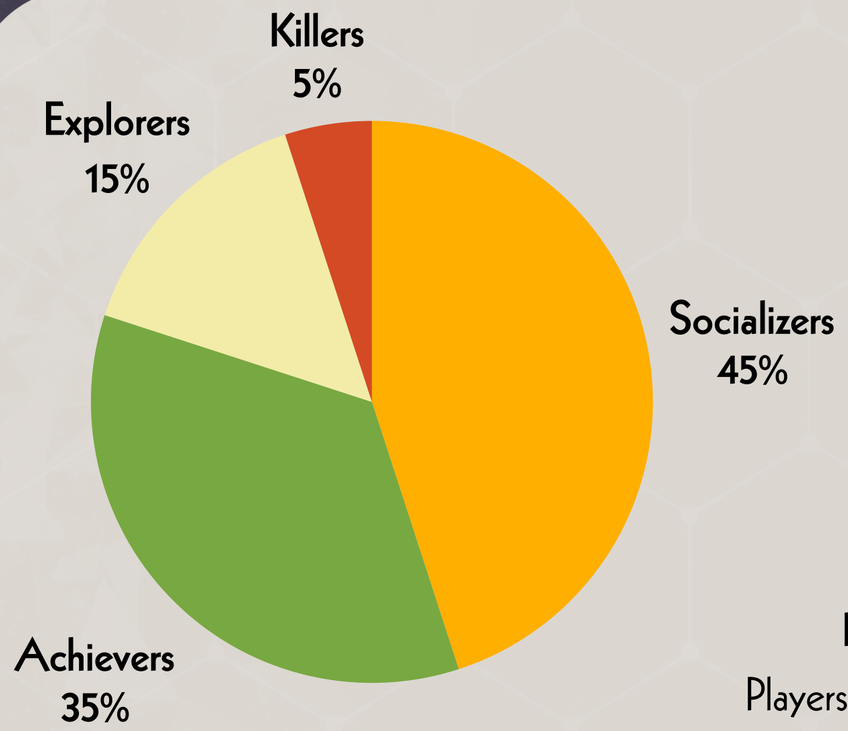
Currently at the **prototype stage**, we aim to release on PC with a seamless **single-player** and up to **4-player co-op** experience in **Q4 2028**.

Game: Hivemind
Studio: Tri-Side Die
Genre: Artificial Life Sim
Platforms: PC (Windows 10/11)
Engine: Unity 6.3

Dev Stage: Prototype
Release: Q4 2028
Modes: 1-4 Player Co-op
Length: Infinite / Persistent
Audience: Fans of Stardew Valley, and The Sims

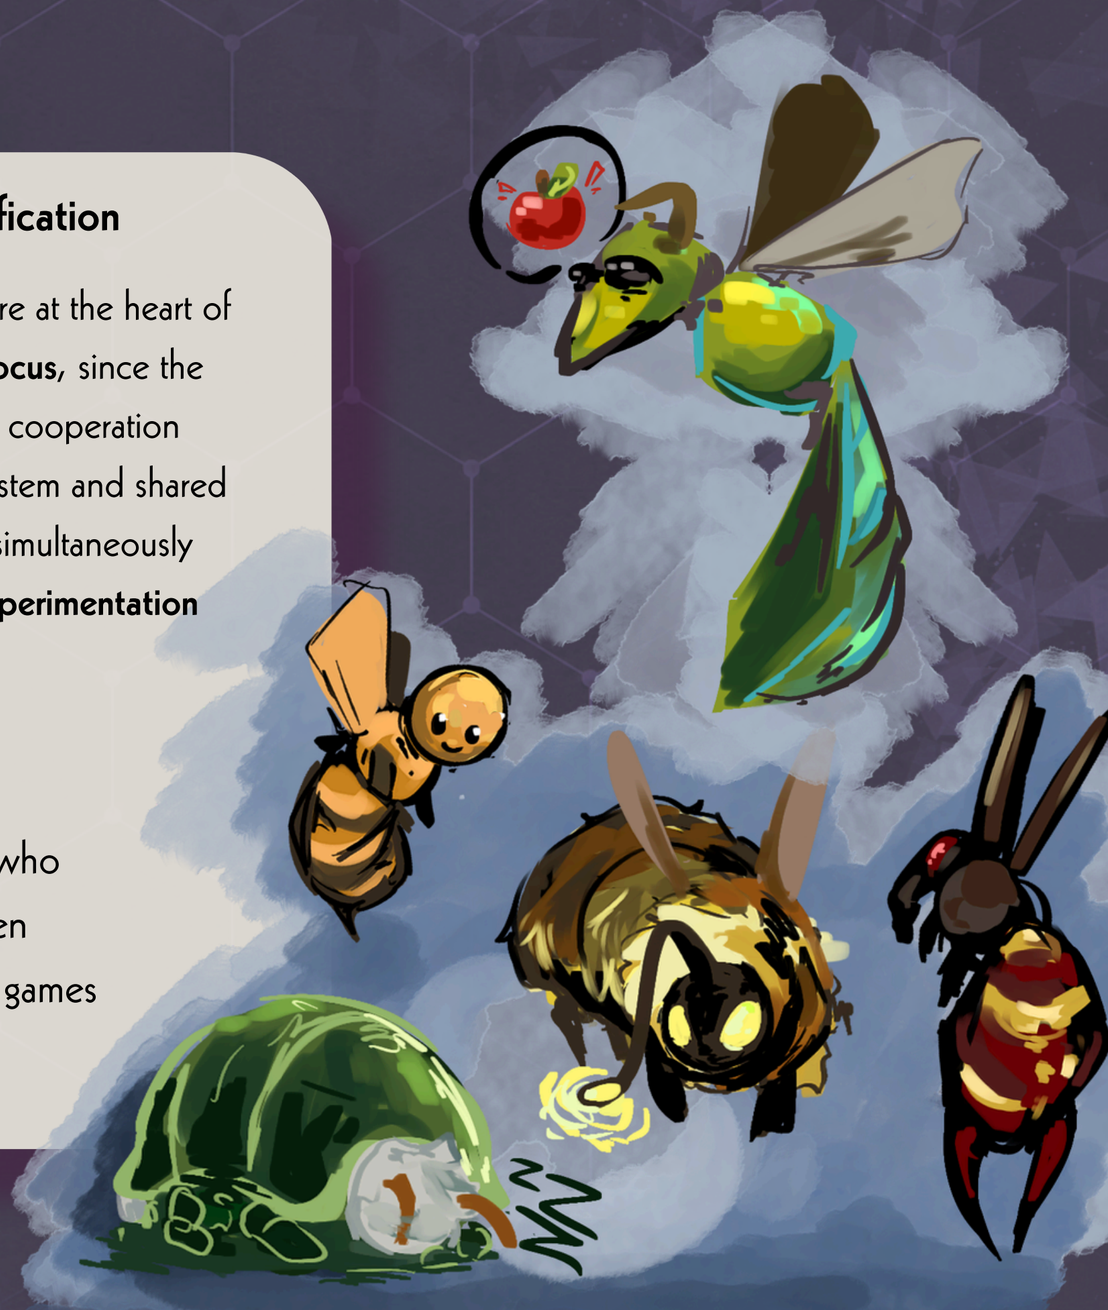
Gameplay

Our Target Audience



The Bartle Classification

Socializers and **Achievers** are at the heart of our **game's cooperative focus**, since the game heavily encourages cooperation through it's Hive merging system and shared pool of resources, while simultaneously **rewarding curiosity and experimentation**



Hivemind is designed for:

Players within the 20-30 age range who

- Enjoy **life sims** where they can sit back and let the game happen
- Strive for reaching **autonomous** efficiency in their **management** games
- Prefer **sandbox** experiences that reward **cooperation**

Unique Selling Points

Each hive is a unique world

Bees come in **many forms, mutations and stories**. Each **new larva with a genetic makeup completely unique**. The livelier the hive, the greater the chaos, especially with a friend or three around. Discover all the species and their mutations!

The Hivemind Formula

Players will be able to **collaborate by visually joining their hives** into one super-ecosystem, sharing bees and resources for a **fully cooperative approach.**

And if we add even more chaos

Your bees and your friends may not be enough to survive in this world. **Threats lurk at all times**! And only the strongest breeds will **survive floods, hornet attacks, foraging events** and worst of all... player neglect.

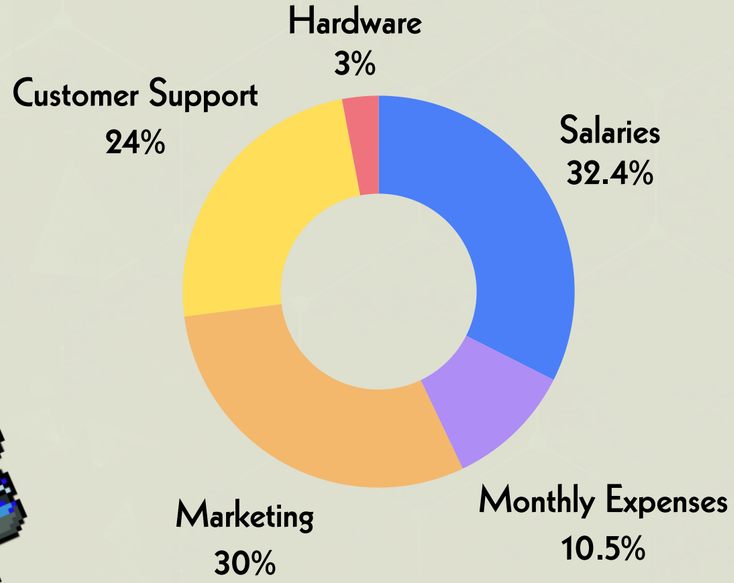
Budget & Schedule

- **Prototype completed**
- Core networking architecture validated
- Multiplayer foundation implemented
- Budget to full release: **€300.000**
- Release planned during **Q4 of 2028**
- Platform release: **Steam (ONLY)**

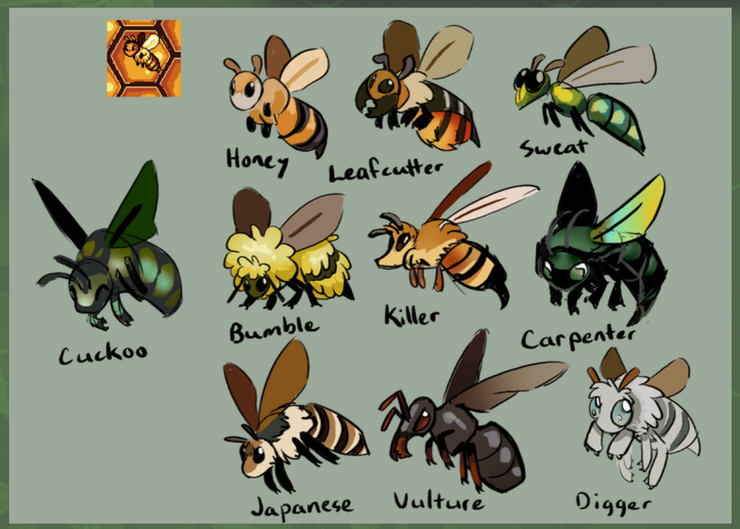


Estimated Delivery Time

Phase	Period	Details
Alpha	Q3 2026 Q1 2027	Core feature implementation including the three grid-based hive editing sub-modes, shared entity authority implementation, and internal stress-testing of up to 4-player sessions.
Pre-Beta & Integration	Q2 2027 Q3 2027	Integrating the Steamworks API, setting up Unity Relay logic, configuring Unity Cloud Save, and implementing diagnostic telemetry reporting.
Open Beta	Q4 2027 Q2 2028	A 6-month public testing phase to gather performance telemetry via Unity Cloud Diagnostics and optimize server update ticks for lower-end target client devices.
Polishing & Certification	Q3 2028	Bug fixing based on beta feedback, performance tuning for the 720p/30fps target spec, and final preparation for Steam store submission.

The Ask

- **Funding** to support development:
  - **New bee** species and **mutations**
  - **Events** system
  - **Better** hive **management**
  - **Customization** options
- **Feedback** on game design
- **QA , localization**
- **Marketing** and **discoverability**



Summary

Game: Hivemind
Studio: Tri-Side Die
Genre: Artificial Life Sim
Platforms: PC (Windows 10/11)
Engine: Unity 6.3
Release: Q4 2028
Modes: 1-4 Player Co-op

Gather Resources and Bees

Keep your hive healthy and varied with expeditions. Escape threats and find new species of bees to add to your gene pools

Defend your Hive

Prepare your colony for the harsher seasons and create an unbreachable fortress that is fully self-sustained

Connect with your friends

Expand your hive to your content, and join up with your friends to become unstoppable

We started **Hivemind** as young and inexperienced developers with a simple **idea**, yet with how much we have **learned** from our experience, we know that our team has the **strength** and **love** to see this simple game to the end.

We want Hivemind to be something people will continue coming back to, something people will have **stories** to tell each other about, an **inspiration** for a **new wave of cooperative games**.

We believe the game has a strong potential with lovers of sim lives, and are more than happy to **adjust the game's direction** to best fit your **commecial strategy**

HiveMind

Thank You
